

Digital Telephony, IT, and Web Development

Project Estimation

Site: Ottawa

Type of Project: Facebook App

General Description

This app will be comprised of 6 pages.

The user will land on a like-gated page with a basic design. An on-page like button is not required, the default like-button will act as the gate.

After liking the page, the user will be taken to a page that describes the contest and allows them to click a button to continue to the Upload page.

On the Upload page, the user will be taken to one of three pages where they will be able to upload a file. The file upload form(s) on each page should handle either photo, audio, or video and store a record of each in a database.

After uploading a video, the user will be taken to a thank you page where they can share with friends and potentially post to their own wall.

All design and UI materials will be provided by the client.

Content Management

A standard admin panel will be installed to manage contest entries. Each entry will have a button to download the photo, audio, or video file attached to that entry.

A Batch-Download button will allow admins to download multiple files at one time.

Total Estimate: \$1050.00 CAD + HST

Time To Complete: 7 Days
